

OPERATING INSTRUCTIONS

MOBILE HYGIENE HANDWASH STATION

Instructions

Fill the Fresh Water Tank with **COLD** fresh water at the filling point (see image below)

The Autoflo Mobile Hygiene Handwash Station operates by the use of an infra-red beam situated on the Autosensor which, when detected by your hand, switches on the water to the unit.

Operate the Autosensor by waving your hand in front of the Green LED Light. The unit will operate for 20 seconds and then automatically switch off.

The Pump will then operate and suck water from the fresh water tank up to the Autosensor.

Adjust the Flow Control Knob to the desired temperature and flow.

Once the Fresh Water Tank empties itself of water, remove the waste water container and dispose of the contents and wash clean prior to replacement.

Refill the Fresh Water Tank.
